

Retinal Evaluation Consent

These procedures allow for a thorough examination of the internal health of your eyes. Without one of these procedures, physicians may only see 30% or less of the eye's interior surface.

Why is it necessary?

It is necessary in order to detect and treat eye diseases such as **cataract, glaucoma, macular degeneration, and diabetes.**

Please choose one of the following:

- Optomap (Recommend by the doctor) (\$20 fee)**
This procedure **REPLACES** the dilation and provides you with a thorough screening of the inside of your eye **without the inconvenient side effects of dilation drops.**

- Dilation**
Eye drops are placed in your eyes, after which you will wait in the lobby for 20 minutes for your pupils to dilate. **Your eyes will typically be dilated and blurry for a total of 4-6 hours.** We recommend having a driver if you don't feel safe driving while dilated.

- None today**
